

Day 3 - Advance Statistics

① Distributions

- ↳ Normal Distr
- ↳ Standard Normal Distr
- ↳ Z score
- ↳ Log Normal Distr
- ↳ Bernoulli's Distr
- ↳ Binomial Distr

Practical

- ① Mean, Median, Mode
- ② Variance, Standard deviation
- ③ Histogram, pdf, Bay plot, Violin plot
- ④ IQR
- ⑤ Log Normal Distribution

① Distributions {

Ages = { 24, 26, 27, 28, 30, 32 - - - - - }

① Gaussian/Normal Distribution

Empirical Formula

68 - 95 - 99.7 % Rule

Dataset

{ 100 datapoints }

Eg: ① Height → Normally Distributed

Domain Expert → {Doctor}

② Weight ③ IRIS DATASET

Eg:

$\mu = 4$ $\sigma = 1$

4.5 → standard deviation

+0.5 sd

4.75 ??

$$Z_{score} = \frac{x_i - \mu}{\sigma}$$

$$= \frac{4.75 - 4}{1} = 0.75 \text{ sd}$$

↑ +ve

3.75

$$Z_{score} = \frac{3.75 - 4}{1} = -0.25$$

$\mu = 4$
 $\sigma = 1$

$$Z_{score} = \frac{x_i - \mu}{\sigma}$$

$\mu = 4$
 $\sigma = 1$

{-3, -2, -1, 0, 1, 2, 3}

$$Z(1) = \frac{1-4}{1} = -3 \quad Z(3) = \frac{3-4}{1} = -1$$

$$Z(2) = \frac{2-4}{1} = -2$$

$y \sim \text{SND}(\mu=0, \sigma=1)$

{ 1, 2, 3, 4, 5, 6, 7 } → Normal Distr

↓
Z score
↓

↑ Standard Normal Distr
($\mu=0, \sigma=1$)

$\{-3, -2, -1, 0, 1, 2, 3\}$ ← Satisfying this property

Practical Application

Dataset

Age (years)	Salary (RS)	Weight (Kg)
24	40K	70
25	80K	80
26	60K	55
27	70K	45

← Score

$$\mu = 0, \sigma = 1$$

Standard Normal Distr

Standardization ← Score

Normalization

$$\{\mu = 0, \sigma = 1\}$$

$(-1 \text{ to } 1) \rightarrow (0 \text{ to } 1)$

→ MinMax Scaler → (0 to 1)

Practical Eg {India vs SA}

① ODI Series ↓ 2021 (CRICKET)

Series Average 2021 = 250

Standard Deviation = 10

Compared to both the Series in which year Rishabh pant final

Series < Team final score = 240

Score was better??

2020

Series Average 2020 = 260

Standard Deviation = 12

Team final score = 245

2021

$$Z_{\text{score}} = \frac{x_i - \mu}{\sigma} = \frac{240 - 250}{10} = \frac{-10}{10} = -1$$

2020

$$Z_{\text{score}} = \frac{x_i - \mu}{\sigma} = \frac{245 - 260}{12} = \frac{-15}{12} = -1.25$$

In 2021 ✓

Final Match

In 2020 ✓

$$\mu = 250 \quad x_i = 240 \quad \sigma = 10$$

$$Z_{\text{score}} = -1$$

$$\mu = 260 \quad x_i = 245 \quad \sigma = 12$$

$$Z_{\text{score}} = -1.25$$

Assignment

Stats Interview Question

$\frac{3}{7}$

Question? : What percentage of scores falls above 4.25?

1 2 3 4 5 6 7 } 1 - 0.5987

$$Z = \frac{x_i - \mu}{\sigma} = \frac{4.25 - 4}{1} = 0.25 = 0.4013$$

\Downarrow 40%

⑤ In India the average IQ is 100, with a standard deviation of 15. What percentage of the population would you expect to have an IQ lower than 85?

$$\text{Ans) } Z = \frac{85 - 100}{15} = \frac{-15}{15} = -1$$

IQ and 90 to 120
